

NEFFESST

ANTIVIRAL AIR PURIFIER

MORE POWER LESS NOISE FOR VIRUS FREE AIR

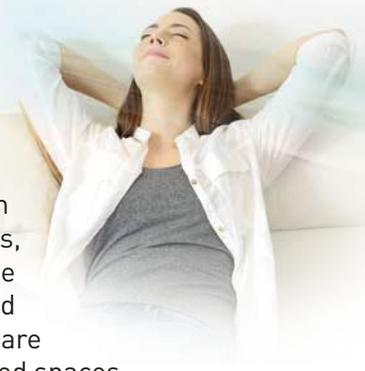

NEFFES
Silent Tower -1200

Clean Air for Health

Clean air is vital for a healthy and long life. The health effects of unclean air are not felt in the short term but reach a health-threatening level in the long term. Every breath taken in crowded and closed spaces transports viruses, allergens, microorganisms and bacteria into the body, which are impossible to see with the naked eye. When the unseen toxins in the polluted air are inhaled, especially in closed and poorly ventilated spaces, they are taken into the body via the nose and lungs and reach the entire body through blood circulation. This is where the importance of inhaling clean air becomes very important. The quality of the air we breath directly affects the functions of the organs in our body. The time spent breathing fresh air has many benefits on the physical health of an individual as well as on the mood, sleep patterns, and brain activities.

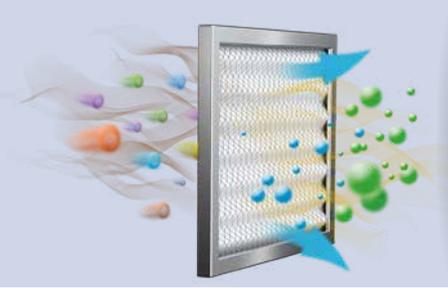

With the Covid-19 (Coronavirus) epidemic affecting the whole world, it is of great importance to increase the air quality in our common living spaces such as homes, restaurants, offices, daycare centers, schools, factories, stores etc.

Clean Air Technology of NEFFES

The air purifiers providing clean air available in the market incorporate conventional air filtering technology. These products generally can retain the harmful microorganism in an environment, but they are not effective against the viruses, which are today's problem. With its cutting edge technology enabling to breathe confidently, NEFFES is an extremely effective air purifier against viruses in addition to bacteria, allergens, and other microorganisms.

Specifications

Pre-filter :

It has a Hygienically coated pre-filter capable of retaining particles larger than 10 µm. It is cassette type and removable easily. In addition, it is washable and has a long service life.

HEPA Filter:

This filter is used for high quality filtration in sensitive environments such as operation rooms and capable of eliminating the harmful organisms by 99.97 %. The NEFFES unit equipped with an automatic filter replacement level measurement system will notify you via a light alarm when your filter needs to be replaced. The HEPA filter used has standard dimensions and a new one can be easily purchased locally for replacement at an affordable cost. The HEPA filter in the NEFFES unit is in class H 14, which is extremely efficient and effective.

User Friendly Remote Controller:

You can set the air flow rate of your unit in 5 stages. You will be notified via light alarm when your pre-filter, HEPA filter need to be replaced.
